Chloroquine and Hydroxychloroquine Prescription Restrictions Alert for COVID-19 Treatment

Last updated: March 27, 2:25 p.m.

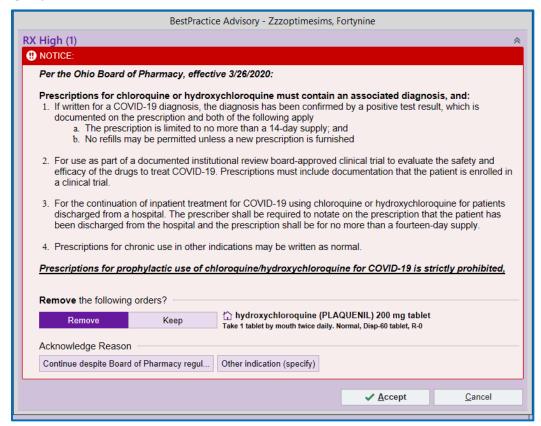

For the most up-to-date information, reference the COVID-19 intranet site.

Starting March 27, in concordance with the national shortage and Ohio Board of Pharmacy emergency rule 4729-5-30.2 of the Administrative Code, a BestPractice Alert (BPA) will display if providers prescribe chloroquine or hydroxychloroquine to:

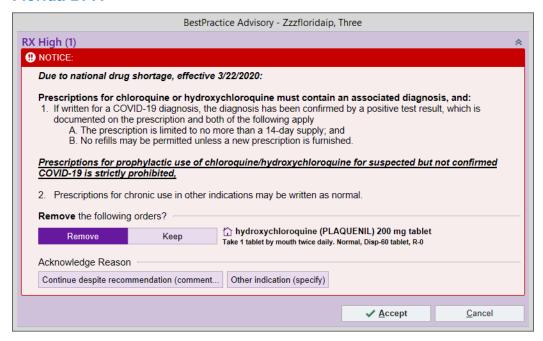

- a patient who has tested positive for COVID-19 or,
- a patient with a COVID-19 diagnosis and the prescription exceeds a 14-day supply or has refills

The alert reminds providers that prescriptions for chloroquine or hydroxychloroquine for the treatment of COVID-19, in addition to <u>requiring an associated diagnosis</u>, may not exceed a 14-day supply; may not be refilled without a new prescription; and may only be used for patients meeting specific criteria.
