

# COVID-19 Positive/PUI Mechanically Ventilated Patients Checklist

✓	<b>Are all endotracheal/ tracheostomy tubing and ventilator connections secured?</b>
✓	Check and secure all endotracheal/ tracheostomy tubing and ventilator connections before providing additional patient care.
✓	<b>If two caregivers are in the room</b> providing patient care, the second caregiver should stabilize the tube and connection when repositioning or transporting the patient.  <b>If a second caregiver is not available</b> to secure the tubing connections, caregivers should don PPE per our recommendations for performing an aerosol generating procedure, in case the tubing is unsecure.
