

Overview

This conference features more than 20 oral research presentations, 50 poster presentations and a dozen research workshops.

The goal of this conference is to disseminate research findings and evidence-based information to clinicians who will use the new knowledge to replicate studies, translate findings to improve patient care quality, safety and outcomes, and to improve evidence-based infrastructure and processes. The focus is on building a capacity for scientific inquiry among attendees. The conference will feature presentations by and for clinical and academic attendees, with time allotted between sessions for formal and informal networking. To enhance knowledge related to methodological issues, the conference will feature 12 workshops (basic and advanced) presented by content experts (statisticians, editors, writers and researchers). Attendees can select up to four workshops.

Conference Objectives

1. Provide a forum for research collaboration and partnerships between clinicians (nurses and non-nurses) at various institutions (clinical and academic).
2. Share results of clinical research studies that will foster a culture of inquiry that will lead to implementation science and foster delivery of care based on best-practice evidence.
3. Increase knowledge of methodological concerns related to research planning and implementation through expert-led methodology workshops.
4. Enhance attendees' knowledge of research processes and clinical research through discussion, networking and expert-led workshops.

Our target audience includes healthcare practitioners (nurses and non-nurses) who are clinically active or engaged in clinical research that improves clinical outcomes or enhances patient adherence to self-care. Who Should Attend?

1. All healthcare professionals.
2. Students in the healthcare professions.
3. Magnet® and Journey to Magnet Excellence® Program coordinators.
4. Academic faculty.

Dr. Cacchione has worked as Gerontological Nurse Practitioner at a PACE program and is currently a nurse scientist at Penn Presbyterian Medical Center. Her program of research has evolved from an exploration of sensory impairment in older adults to the usability and acceptability of technology (robotics) among older adults. Dr. Cacchione serves on the editorial boards of the *Journal of Gerontological Nursing and Research in Gerontological Nursing* and she is Editor of *Clinical Nursing Research, An International Journal*. Dr. Cacchione has been honored for her accomplishments and inducted as a fellow in the Gerontological Society of America and the American Academy of Nursing.
