Cleveland Clinic Cancer Center
2013-2014 Annual Report

Fighting Back
A young man’s inspirational battle with lymphoma
Chairman’s Report

The Cleveland Clinic Cancer programs at Fairview and Lakewood Hospitals are fully integrated into the Cleveland Clinic Taussig Cancer Institute. These programs are widely recognized as centers of excellence for cancer care on the west side of Cleveland. Since establishing this network cancer program six years ago, we have consistently been rated among the top cancer programs in the nation by the American College of Surgeons Commission on Cancer.

In April 2014, we again completed a highly successful network recertification survey. The program had no deficiencies, and received seven commendations, the maximum possible. In addition, one of the surveyors Dr. William Stanton, Medical Director of Cancer Care at the Scripps Clinic in San Diego, complimented our staff for the unique ideas and best practices that we have incorporated into in the way we care for our patients.

In their final summation, the reviewers wrote: “The program is operating at a very high level as a network, and is poised to expand. Their competence was well demonstrated during the survey. They worked efficiently and collaboratively to answer all surveyor questions. Truly a wonderful program.”

Just over one year ago, we introduced an outpatient computer-based chemotherapy ordering system called BEACON. The system incorporates evidence-based chemotherapy regimens for all of the major disease groups. The system is designed with checks and balances at multiple levels to ensure that the appropriate treatment is given to each patient and to avoid chemotherapy errors. In October this year, we successfully introduced BEACON to inpatients.

Progress in cancer care can only occur in an environment where research is encouraged. Clinical research of new treatments is important in saving lives and prolonging survival in cancer patients. All of our clinical trials are integrated with the Cleveland Clinic Taussig Cancer Institute, and the Case Comprehensive Cancer Center, a National Cancer Institute designated comprehensive cancer center program. There are fewer than 50 such NCI-designated cancer programs in the United States. In addition, the U.S. News and World Report rated the Taussig Cancer Institute as the #9 cancer program in the nation and the #1 cancer program in Ohio.

At present, it is estimated that there are 14 million cancer survivors in the United States. There is increasing concern that treatments that result in cure may have long term consequences. As such, we have developed new programs to follow patients closely to detect long term complications of therapy.

Cancer care involves more than just medical treatments. Patients suffering from cancer have many social, financial, and emotional needs. These needs involve the families of patients as well. Our Caring Continues Fund provides financial help to those in dire need.

Finally, good cancer care can only occur in the right environment. At the Cleveland Clinic, we stand by our motto of Patients First. Our cancer center staff show an unparalleled concern for the welfare of our patients.

Timothy P. Spiro, MD, FACP
Chairman, Cancer Committee

In their final summation, the reviewers wrote: “The program is operating at a very high level as a network, and is poised to expand. Their competence was well demonstrated during the survey. They worked efficiently and collaboratively to answer all surveyor questions. Truly a wonderful program.”
Christian Borrero is no stranger to challenges. The 27-year-old Lakewood man was born with cerebral palsy. But he doesn’t let that stop him from living independently, working a part-time job and exercising regularly. He also enjoys writing poetry, reading and spending time with family and friends. But just over a year ago, he found himself facing an even bigger challenge.

“On the Friday before Memorial Day 2013, I had night sweats. I didn’t think much of it, just got up the next morning, took a shower, went to the gym and then to work. About halfway through the workday, I had pain in my back like someone was kicking me. I thought maybe I had pulled a muscle, since that is common in people with cerebral palsy,” he says. “By Sunday, every time I took a deep breath, it hurt. So, I went to the emergency room at Lakewood Hospital, where a chest CT scan showed a tumor located behind my chest area, near my heart.”

Christian’s primary care physician referred him to a specialist, who conducted needle biopsies of the tumor. In June, he was diagnosed with a large B cell non-Hodgkin’s lymphoma.

According to Anthony Mastroianni, MD, JD, MBA, Director of Radiation Oncology at the Cleveland Clinic Cancer Center at Fairview Hospital, “Lymphoma represents an uncontrolled growth of immune cells, typically found in lymph nodes. Lymphoma, like any other cancer, can affect any person.

The fact that Mr. Borrero has cerebral palsy did not increase his risk of developing lymphoma, nor did it limit our ability to treat him.”

Christian’s Fight
Under the direction of Cleveland Clinic medical oncologist Seema Misbah, MD, Christian underwent six rounds of chemotherapy. It was administered during a seven-hour appointment every three weeks over the course of about four months at the Fairview Hospital Cancer Center.

The treatment recommendations for lymphoma have evolved over time. Many patients are treated with chemotherapy followed by radiation. In Christian’s case, because the chemotherapy was successful at significantly reducing the size of his tumor, radiation therapy was suggested as a means of decreasing the chance of recurrence, although it may have little impact on overall survival.

“Most patients with early stage lymphoma will see a radiation oncologist for an opinion regarding the role of radiation therapy specific to their situation, as we do not always recommend radiation after chemotherapy,” says Dr. Mastroianni. “We explain the risks, benefits, rationale and alternatives to the addition of radiation in disease management, so each patient can make an informed decision.”

The length of treatment, dose, size of the area to be treated and use of radiation therapy is dependent on the stage of the disease and patient-related factors. Christian chose to move forward with radiation treatment because, in his opinion, “the risks of not having the treatment at all outweighed the risks of the treatment itself.”

Christian underwent daily radiation oncology treatments five days each week for one month. Through all of his chemotherapy and radiation treatment, he was rarely sick or missed work.

“If I said this hasn’t changed me, I’d be lying,” he says. “I feel like a whole new person — life is good! I love harder than ever before and am much closer to my family and friends, who really helped me get through this. I have a lot to celebrate as I turn 28!”
Comprehensive Services Offered

Medical Oncology
Our Cleveland Clinic physicians are board certified in medical oncology and/or hematology. All have expertise in diagnosing and treating all types of cancer.

Breast Surgery
Breast surgeons evaluate and treat patients with both breast cancer and benign breast conditions. We offer minimally invasive breast biopsy techniques, sentinel lymph node biopsy, oncplastic surgery for breast conservation and nipple sparing mastectomies. A high risk clinic is available.

Gynecologic Oncology
Gynecologic cancers are diagnosed and may be treated with combinations of surgery, chemotherapy and radiation therapy. Robotically assisted surgery is offered as well as minimally invasive techniques.

Urology/Urologic Oncology
Both benign and cancerous conditions are diagnosed and treated. Robotic-assisted surgery is an option. The multidisciplinary prostate clinic is available for the newly diagnosed patient with prostate cancer.

Chemotherapy
The suite has 23 chairs where chemotherapy as well as other infusions (iron and blood) can be administered. The nurses are certified by the Oncology Nursing Society.

Nurse Navigators/Support Nurses
Nurses work with physicians to plan the calendar of treatment, navigate through the different specialties and referrals, and provide a communication and support link between the physician and patient.

Pharmacists and Pharmacy
The pharmacy staff is solely dedicated to the Cancer Center and are trained in mixing chemotherapy.

Clinical Trials
Clinical trials are available in collaboration with Cleveland Clinic and the Case Comprehensive Cancer Center at Case Western Reserve University.

Genetic Counseling
On-site counseling and testing is available twice a month.

Laboratory Services
Lab services are located onsite for patient convenience and time efficiency.

Support Groups
There are general support groups such as I Can Cope®, and specific support groups such as the Gynecologic Group that meet monthly. Collaboration with the American Cancer Society on groups such as Look Good, Feel Better® is also available.

Survivorship Program
Under the auspices of an advanced practice nurse, the program offers classes and individual care planning for the future, after cancer treatment is finished.

Financial Counseling
Financial counselors are onsite daily to discuss Medicaid screening, charity care and general customer service.

Nutrition Support, Pastoral Care and Rehabilitation
Experts in all areas are part of our team.
Commission on Cancer Certification: Cancer Center receives gold award

Commission on Cancer Certification
The Fairview/Lakewood Hospitals Integrated Network Cancer Program has been awarded a three year accreditation by the American College of Surgeons, Commission on Cancer (CoC). This prestigious accreditation recognizes select cancer programs across the nation that provide high-quality cancer care and a full range of services to diagnose, treat, and support cancer patients and their families. The survey was conducted in April, 2014. In addition to full accreditation, the program received the gold award for having commendations in all possible standards:

- A high rate of patient participation in clinical trials
- A commitment to the education of the cancer registry staff
- Participation in the rapid reporting system to track performance measures in a timely fashion
- The cancer program's production of an annual report
- College of Pathology protocols in reporting are followed
- Oncology nursing care is provided by nurses with a specialized skill set and competency is evaluated
- Annual submission of cases of cancer to the national database which meet the quality criteria

According to the CoC, cancer program surveys are a “comprehensive evaluation of the entire scope, organization and activity of a cancer program.” The program was evaluated by a physician surveyor and an administrator of a large cancer program who received special training to evaluate the 34 standards set forth by the Commission.

Radiation Therapy received accreditation from the American College of Radiology on May 1, 2014. This is also a three year accreditation which was awarded to the Cleveland Clinic main campus and all satellites, including Fairview Hospital. The award letter states that the accreditation shows the “highest standards of the radiation oncology profession.”
Fairview Breast Center’s Excellence Recognized by Two Major Organizations

The Breast Health Center at Fairview Hospital is the only west side hospital to have achieved two major designations recognizing its excellence.

Fairview was accredited six years ago by the National Accreditation Program for Breast Centers, the first center in Ohio to do so. This program requires centers to meet 27 standards and go through a rigorous evaluation to review their performance.

To maintain accreditation, centers must undergo an onsite review every three years. In 2012, Fairview’s program was recertified for another three years.

Fairview also has been recognized by the American College of Radiology as a Breast Imaging Center of Excellence. This designation looks at the quality of the mammograms, ultrasounds and stereotactic biopsies performed at a center.

“We are the only Breast Health Center on the west side to have both of these designations,” says Debra Pratt, MD, FACS, medical director of the Breast Health Center, part of Cleveland Clinic’s Cancer Center at Fairview Hospital. “We are very proud of the care we provide. We have opened our doors to let outside organizations critique us and help us identify areas in which we can improve. We are constantly reviewing our outcomes and making positive changes to benefit our patients.”

To enable patients to be quickly scheduled for a biopsy, the Breast Health Center created a Fast Track program in which nurses meet with these patients, consult with their primary care provider and help them get on a surgeon’s schedule sooner.

“With the Fast Track process, patients who are Category 5 are getting their biopsy within five days,” Dr. Pratt says.

“Our goal is to have 100 percent of Category 4 and 5 patients seen for a biopsy within five days, as long as they have no medical problems that prevent this and their own schedule permits them to do it,” she says.

Dr. Pratt adds that another significant improvement is the increased use of minimally invasive breast biopsies. National data, she says, suggest that only 60 percent of patients who are suited for a minimally invasive breast biopsy undergo that procedure. At the Breast Health Center, the education and support provided to practitioners has resulted in a minimally invasive biopsy rate of over 90 percent.

Another improvement the center has made is to ask all women coming in for a routine screening mammogram if they have any palpable lumps in the breast(s). This indicates they need a diagnostic mammogram not a screening mammogram. The patient is scheduled for a more comprehensive diagnostic mammogram within a week.

“The Center further distinguishes itself by offering a full spectrum of care for breast cancer patients. For example, it offers a free survivorship class to help women maximize their health after cancer treatment.

“This type of program is not offered by all facilities, but we feel it is important as more and more women survive breast cancer today,” says Dr. Pratt. “We are committed to being there for our patients.”
Fairview/Lakewood Hospitals Integrated Network Conferences

Under the direction of Hamed Daw, MD, the Fairview/Lakewood Hospitals Integrated Network held 42 weekly multidisciplinary Cancer Conferences between the two facilities, Fairview and Lakewood hospitals.

Cancer Conference physicians discussed staging and offered recommendations based on national guidelines in cancer patient management on all presented cases. The average weekly attendance was 16 attendees, which included medical and radiation oncologists, pathologists, diagnostic radiologists, surgeons, internists, residents, nurses and other allied health professionals.

Oncology Data Services: Cancer Registry Report

The cancer registry is an essential component of the Commission on Cancer (CoC) accredited cancer program. The Fairview/Lakewood Hospitals Integrated Network Cancer Program is a strategic partner with CHAMPS Oncology Data Services (ODS) who staffs the registry with Certified Tumor Registrar’s and CoC consultants. ODS personnel help programs achieve their goals by collecting and reporting quality cancer data in support of their business planning and outreach initiatives.

Data collected by the cancer registry is an invaluable tool in the fight against cancer. As an accredited CoC program the registry collects demographic and disease specific data elements on each cancer patient presenting for diagnosis or treatment. The information collected is utilized by physicians, administration and other healthcare professionals. In 2013, there were 1,315 analytic and 135 non-analytic cases for a total of 1,450 cases accessioned. Analytic cases are submitted monthly to the Ohio Cancer Incidence Surveillance System (OCISS) and annually to the National Cancer Data Base (NCDB) for use in statistical analysis. Data collection performed by oncology data specialists is a crucial element in research and the development of clinical trials. Cancer registry data is instrumental in resource allocation, production of survival data and evaluating efficacy of treatment modalities.

Continuing education is a priority for the staff of the Oncology Data Services. They are encouraged to attend all available educational venues to strengthen their knowledge of cancer diagnosis and treatment, and the management of that data.

2012 – Integrated Network Cancer Program Practice Profile Reports (CP3R) For Breast, Colon and Rectal Cancers

The National Cancer Data Base (NCDB) records and stores data from cancer programs nationwide. This repository allows cancer programs to compare their patient characteristics, cancer types, treatments and outcomes with other programs. The National Quality Forum (NQF) identified and endorsed the quality metrics listed below as indicators of quality oncology care. Commission on Cancer-approved programs can access the data and compare their performance on these indicators to other programs. Data is based on 2012 data which is the most current data released from the National Cancer Data Base. The last column reflects the percentage of the Network Cancer Program. A comparison is made to State and National metrics.

Number of cases excluded: 0

This report INCLUDES CA in-situ cervix cases, squamous and basal cell skin cases, and intraepithelial neoplasia cases
Cancer Program Community Outreach

Community Outreach
The Cleveland Clinic Cancer Center at Fairview Hospital is very active in the community. Our devoted caregivers volunteer their time to help educate the community, offer screenings, provide resources and participate in events.

How a Plant-Based Diet Can Be a Powerful Tool in the Prevention of Cancer
According to the American Institute for Cancer Research, no single food or food component can protect you against cancer by itself. But strong evidence does show that a diet filled with a variety of plant foods such as vegetables, fruits, whole grains and beans helps lower risk for many cancers. Jennifer Warden, certified in plant-based nutrition and Karen Stanfar MPH, RD, LD, educated participants about the best foods to consume as part of a cancer prevention plan. Participants enjoyed samples and were given recipes to try the meals at home.

Light The Night
Fairview and Lakewood hospitals showed their support for the Leukemia and Lymphoma Society (LLS) by organizing walking teams for Light the Night. Cleveland Clinic teams surpassed their fundraising goals and walked for LLS on October 22.

Dress in Blue Day
In recognition of National Colorectal Cancer Awareness Month, Dress in Blue Day was held on March 14 at Fairview Hospital. The event raised awareness of colon cancer, offered risk assessments and provided vital information to visitors and employees regarding risk reduction, early screenings and symptoms. Nearly 200 took advantage of the opportunity to do a colon cancer risk assessment.

Senior Center Colorectal Screenings
Staff provided Hemoccult II screening kits and colon cancer awareness information to seniors at Avon Lake Senior Screening day in partnership with the Avon Lake Public Library on May 2.

Fit in Fairview
Kevin Kerwin, MD, spoke to over 100 Fit in Fairview participants about cancer risks and controllable lifestyle factors such as diet, BMI, exercise and tobacco use.

Be Well West Park Wellness Challenge
Jason Knight, MD discussed the epidemiology and prevention of cancer at the Be Well West Park Wellness Challenge on October 30. The program engages 50-80 community members each week and is a partnership with the West Park YMCA. Dr. Knight spoke also addressed HPV and cancer screening guidelines for men and women.
Relays for Life
Supported Relays for Life for the American Cancer Society with teams at Rocky River, Lakewood, North Olmsted, and Fairview Park. Survivor gifts were distributed at each event.

Drive for Life Golf Outing
At the 12th Annual Drive for Life Golf Outing, 150 golfers raised over $35,000. This event is sponsored by Community West Foundation and proceeds benefit the Cancer Center at Fairview Hospital.

Men
For Men Only: Commit to be Fit!
Our Community Health Needs Assessment identified zip codes in the Fairview Hospital market that have a higher disease prevalence of prostate cancer. Held at the Gunning Recreation Center for easy access for men in the targeted demographic, this event featured screenings, information, facility tours and dinner followed by educational presentations. The October 7 program was exclusively for men. Ryan Williams, MD, and Rajan Ramanathan, MD, addressed topics for this at-risk population. These Cleveland Clinic physician specialists explained the benefits of fitness, exercise and nutrition in maintaining a healthy weight and preventing cancer and other diseases.

Women
Ladies Night Out
Mita Patel, MD, moderated a women’s health panel discussion at Ladies Night Out on May 6, 2014. Experts included Jason Knight, MD, who addressed gynecological oncology topics. Ladies Night Out reached 123 women.

HOPE Program (Breast Cancer Screening Program)
Breast cancer screening was held on Wednesday, November 19 at the Breast Health Center at Fairview Hospital. The screening targeted both insured and uninsured women. The uninsured, low-income women benefited from the HOPE program. The screening was held in response to the Community Health Needs Assessment that identified women in our service area at a higher risk for late-stage breast cancer incidence. The overall goal of the screening is to reduce the number of patients with late-stage disease by encouraging annual mammograms for women over 40, by offering frequent screenings and providing education on breast health awareness at screening events.

- Assistance to 79 women
- 44 screening mammograms
- 23 diagnostic mammograms
- 12 breast ultrasounds
Mammogram Direct Mail Campaign

Over 88,000 women over the age of 42, in Cuyahoga and Lorain counties received a mammogram reminder mailer mammogram in November. The direct mail piece encouraged women over the age of 42 to take time to schedule a mammogram at one of our convenient locations and also highlighted the Fairview Breast Center. The campaign focused on reactivating patients in these geographic areas who have not returned for a mammogram for 18 months or more. The campaign also targeted at non-patients to schedule a mammogram.

Kamm’s Corner Farmer’s Market

Distributed breast health educational materials – screening guidelines and information on nutrition, exercise and cancer prevention – to over 100 women.

Breast Health Community Outreach

The Cancer Network of Fairview and Lakewood hospitals is committed to providing state-of-the art breast health care to women in our community, regardless of their financial status.

Scientific and epidemiological data have been used to improve survival rate by diagnosing breast cancers earlier and by education women on breast health and screening guidelines. By correlating our data with the Ohio Department of Health, we can show where the highest incidence of later stage breast cancer occurred geographically, by zip code.

Youth

Teen Health Fair at St. Ignatius High School

Fairview Cancer Center Outreach partnered with Lutheran Hospital Community Outreach for a Teen Health Fair at St. Ignatius High School on Friday, April 4. The health fair focused on anti-tobacco including cancer risks associated with tobacco use, and testicular cancer awareness. Over 200 young males received education on these topics.

Bay Village High School Health Fair

Provided breast and testicular health information at the Bay Village High School Health Fair on May 8. Over 250 students were educated.

Westlake High School Wellness Fair

Staff volunteers educated more than 600 students on breast health, testicular health, anti-tobacco issues and sexual assault/dating violence at the wellness fair on March 18. BMI screening and education were provided to 132 students.
Annual Triumph for the Cure Golf Outing
Over 100 golfers raised over $20,000 to benefit the Breast Health Center at Fairview Hospital. Held at Westwood Country Club in Rocky River, the event is sponsored by Community West Foundation.

Panera Pink Ribbon Bagel Campaign
Fairview and Lakewood hospitals joined other cancer providers throughout the Cleveland Clinic health system to support the Panera Pink Ribbon Bagel campaign. In 2014, the Pink Ribbon Bagel campaign sold more than 60,000 bagels throughout Greater Cleveland area. A portion of the proceeds benefit cancer programs throughout the Cleveland Clinic enterprise.

Pink Tab
Each year the Cancer Center supports the Pink Tabs sponsored by the local newspapers in Cuyahoga and Lorain Counties. The Pink Tabs provide an opportunity for Cancer Center oncologists and support staff to educate the community about prevention, new treatments and support services.

City of Lakewood Women’s Luncheon
Breast Health Center Case Manager, Michele Ljubi, represented the Fairview Hospital Cancer Center at a Breast Cancer Awareness luncheon on October 2.
Survivorship Program

The Cleveland Cancer Center at Fairview Hospital provides its oncology patient population a comprehensive Survivorship program designed to meet their physical, psychological and emotional needs following active treatment. This program provides an array of services and is coordinated by an Advanced Practice Oncology Nurse in collaboration with social work, rehabilitation, dietary, clergy and various community agencies.

Services and programs include:
- Provision of Treatment Summary Documents
- Facing Forward Live, survivorship education classes
- Individualized survivorship visit with an APN focusing on long term issues and wellness.
- Lymphedema education and monitoring program
- Healthy Eating and weight management counseling
- Cancer Rehabilitation therapies
- Individualized exercise program “Fitness Forward”
- Psychological and social support through counseling and support groups
- Oncofertility patient education, counseling and referral process

These educational and supportive services provided by the Cancer Survivorship program at Fairview Hospital support and assist our patients in achieving a healthy and happy “new normal” following their treatment at our Cancer Center.

Clinical trials

While the national average for participation in clinical trials is approximately 5%, the Cancer Research program boasts a high rate of clinical trials participation of 11.6%. The program offers state-of-the-art treatment which is a major focus. Clinical trials are in conjunction with Cleveland Clinic Taussig Cancer Institute. Currently, most trials are Cooperative Group as well as Investigator Initiated and Industry Sponsored. The Cooperative Groups we work with are SWOG, NSABP, ECOG, CALGB, RTOG and GOG. In collaboration with these nationwide cooperative groups, we are able to bring the most up-to-date treatment options and research to our patients. The center offers research in the areas of treatment, symptom management, screening and prevention. Clinical trials are offered to patients with many different disease states including breast, colon, lung, prostate, ovarian, head and neck, lymphoma, myeloma and pancreas.

Cancer Clinical Trials Accruals

* Based on 2010 data from cancer.net.
Psycosocial Services Program

Oncology Social Work support is available to all our cancer patients. This support is provided through individual counseling, crisis intervention, and referral to community resources, educational or group supports. These interventions are focused on helping people cope with the medical, emotional, and social problems they encounter at different points in the cancer experience. Our Oncology Social Work staff assesses all patients in Chemotherapy and Radiation. We utilize a Distress Screen tool during physician appointments to also identify patients with a need for Social Work intervention. In addition, our Oncology Social Workers help people navigate the health care system and find support to manage the day-to-day challenges of living with cancer. We are proud to have an Oncology Social Work staff that has a passion for making a difference in our patients’ lives.

Patients with cancer frequently express a sense of isolation and a feeling of being unprepared for coping with this unexpected crisis in their lives. By attending a support group they are able to meet others in similar circumstances, to share methods of coping, learn more about issues and concerns related to their cancer, and to develop new relationships at a time of perceived isolation. We offer numerous support group opportunities for patients and loved ones as well. Our monthly disease specific groups include:

- Blood Cancers
- Gynecological Cancers
- Oral, Head and Neck Cancers
- Prostate Cancer
- Cancer of the Larynx

We have a cooperative relationship with The Gathering Place, a local non-profit support organization that has coordinated numerous joint educational and supportive events for cancer patients and loved ones in northeast Ohio.

We also work cooperatively with several national cancer non-profit organizations to provide supportive opportunities for our patients:

- The American Cancer Society
- The Leukemia & Lymphoma Society
- SPOHNC (Support for Oral, Head and Neck Cancer Patients)

At the Cancer Center we offer art and music therapy which patients and families enjoy.

Helping Those in Need Through The Caring Continues Fund

The reality of a cancer diagnosis is worrisome enough, but many patients find themselves facing financial hardships at the same time. The Caring Continues Fund, through the Community West Foundation, was created as a way to reach out to assist patients who face financial hardships as a result of their cancer diagnosis. Since the fund was launched, thousands of dollars have been donated to help eligible patients each year cover expenses such as rent, groceries, heating bills, prescription medications, gas and more.

Gifts from the Caring Continues Fund are available to cancer patients who are currently receiving treatment at the Cleveland Clinic Cancer Center at Fairview Hospital. In 2013, the Caring Continues Fund helped more than 200 patients.

Local Girl Scout Troop donates blankets for the patients at the Cleveland Clinic Cancer Center at Fairview Hospital.
