

Fundamentals of Central Venous Access (FCVA)

Course overview

Gain essential skills in ultrasound-guided central venous catheter placement under the guidance of experienced Cleveland Clinic clinicians. This course is intended for physician trainees, APRNs, PAs, CRNAs and students preparing for these roles. It is also ideal for clinicians who wish to integrate these skills into current practice, refresh skill acquisition, or maintain current and best practices with the skills in a simulated environment with real-time feedback.

Course format

There is an asynchronous, online learning component to be completed prior to attending the onsite workshop.

The onsite workshop is a four-hour, hands-on, interactive, session with individualized formative feedback and guidance provided by an experienced caregiver. Content included in this session includes:

Onsite session

- Emphasis on quality and patient safety measures including the Universal Protocol Checklist
- Ultrasound image quality optimization
- Vascular assessment on live models (if available)
- Repetitive practice on task trainers

- Sterile technique practice
- Formative assessment of simulated procedures

Details

Location

Cleveland Clinic Main Campus, Simulation and Advanced Skills Center, Cleveland, Ohio

Time commitment

Four hours of hands-on training

Learner capacity

Minimum of three, maximum of eight participants. The 1:4 instructor/learner ratio means there will be one instructor to four learners; two instructors to eight learners.
